Safety  
- Beware of hot shelves - 15 min at 400 W will get the shelves hot enough to burn your fingers. Let the shelves cool or use Beta Wipes for insulation.

Process Restrictions  
Material Restrictions  
- For use with standard semiconductor process materials only

Parameter Restrictions  
- 500 W max power! - 10 minutes max. at 500 W - 15 minutes max. at 400 W.

Scheduling / Sign-up Restrictions  
- Tool is typically used without scheduling, but unscheduled users should yield to a scheduled user.

Requirements (Do Every Time)  
- Check the process power and time settings after loading the process. - Be sure the shelves are plugged in correctly.

Prohibitions (Never Do)  
- Do not exceed the power and time limits stated above.

Common Problems

| Problem: System stops during process. Controller indicates a loss of gas pressure | Root Cause: Unknown | Solution: Reset controller and start again. If this fails 3 times try another process. If this doesn't work contact the tool manager. |
